DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities: on page 2, line 25 "he" should be changed to --the--; on page 9, line 2 "to" should be changed to --so--; and on page 12, lines 15 and 16 "main seam" should be changed to --main seal--.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Kano et al. (JP Patent No. 2004278576A).

Regarding claim 1, the Kano et al. (hereinafter "Kano") reference discloses a gas seal structure (Fig. 4) comprising:

a main seal means (11) that is made of rubber (Fig. 4) and is disposed between two seal surfaces (e.g. surfaces of 11 and 12);

a sub-seal means (15) that is made of resin (Fig. 4) and is disposed between the two seal surfaces (Fig. 4), the sub-seal means being located closer to a higher-pressure region than the main seal means (Fig. 4) and being provided with a concave groove (groove between lips 16); and

a pressure variation reducing means (e.g. groove holding seal 2) that is disposed between the main seal means and the sub-seal means (Fig. 4) and has a variation reducing space (e.g. space of groove) connected to a gap (e.g. gap between 11 and 12) formed between the two seal surfaces and having a volume (e.g. volume of groove). Note that the Kano reference discloses the structural limitations of claim 1 and the pressure variation reducing means of the Kano reference is **capable of** inhibiting occurrence of a blistering phenomenon in the main seal means.

Regarding claim 2, the Kano reference discloses the sub-seal means being disposed such that the concave groove opens toward the higher-pressure side region (Fig. 4).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Kano.

Regarding claim 3, the Kano reference discloses the invention substantially as claimed in claim 1.

However, the Fig. 4 of the Kano reference fails to explicitly disclose the concave groove of seal 15 opening toward a lower-pressure side region.

Figs. 1-3 of the Kano reference discloses making the concave groove of a seal open toward a lower-pressure side region.

It would have been obvious to one of ordinary skill in the art at the time of the invention to reverse seal 15 of Fig. 4 in view of the teachings of Figs. 1-3 of the Kano reference in order to limit the pressure acting on main seal 1.
